

SEO analysis and 90-day plan for PTHHS.net

Executive summary

This report is a public-web SEO audit of PTHHS.net conducted on **July 10, 2026**. The site is indexable enough to appear in search, the root host redirects to the [www](#) version, and the business has real-world trust signals including a long operating history, an active Texas HHSC contract listing for PHC/FC/CAS, insurance participation, leadership bios, and visible testimonials. However, the site's biggest SEO problems are not "Google can't see the site." They are **template-level relevance errors, weak intent targeting, thin local pages, unclear conversion paths, and likely measurement blind spots.** ¹

The most serious issue is that several important pages are optimized for the wrong topic. The contact page is labeled "**Light Housekeeping in Houston, Texas,**" the appointment page is labeled "**Children Health Plan in Houston, Texas,**" the staff page is labeled "**Attendant Care Services in Houston, Texas,**" the insurance page is labeled "**Home Health Therapy in Houston, Texas,**" the attendant-care page is labeled "**Elderly Care in Texas,**" and the respite page is labeled "**Elderly Home Care in Houston, Texas.**" These mismatches create search-intent confusion, dilute topical relevance, and risk keyword cannibalization across service, utility, and team pages. ²

The second major issue is **business-model ambiguity on the site itself**. Public evidence strongly suggests Primetime is not just a generic senior-care brand; it likely depends heavily on **Texas Medicaid and HHSC-linked personal attendant / community attendant / respite programs**, while also recruiting caregivers and supporting referrals. The site does not yet separate those audiences clearly into distinct SEO and conversion journeys. That means high-value organic visits may land on a page that does not answer the user's real question: "Do I qualify?", "Which insurance do you take?", "Do you serve my area?", or "How do I become a paid attendant?" ³

The third major issue is **local authority leakage**. The website lists the current office as **11602 Burdine Street, Suite A, Houston, TX 77035**, but at least one public care directory still shows an older Bissonnet address. Citation inconsistency like that can weaken local trust and local pack performance because Google's local systems rely on relevance, distance, and prominence, and profile accuracy matters for discoverability. ⁴

The opportunity is substantial. Primetime already has assets that many local care businesses lack: years in business, a large attendant workforce, payer acceptance, real testimonials, identifiable leadership, and a clearly defined Greater Houston footprint. If the site is rebuilt around **program pages, service pages, eligibility pages, location pages, and tracked lead-generation events**, the domain should be able to capture much more non-branded demand and convert more of it into calls, forms, and referrals. Google's own guidance continues to emphasize crawlable pages, people-first content, clear titles/headings, crawlable links, and mobile-friendly experiences. ⁵

Highest-priority moves

Priority	What to do	Why it matters
Critical	Fix page-title and H1 mismatches on service, contact, appointment, team, and insurance pages	Relevance and conversion are being diluted by obvious template mis-targeting. ²
Critical	Split the site into distinct acquisition paths for care seekers, Medicaid/HHSC program seekers, caregiver applicants, and referral partners	The current structure mixes several intents on the same templates and weakens page usefulness. ⁶
High	Add GA4 + Search Console confirmation, lead events, call-click tracking, and thank-you-page or event verification	Without usable measurement, you cannot prove what organic traffic generates leads. Google recommends event-based measurement and Search Console verification. ⁷
High	Create dedicated pages for Protective Supervision, Personal Attendant Services, Community Attendant Services, Eligibility, and Accepted Insurance / Plans	These are visible business themes, but the site does not currently express them as strong search-intent landing pages. ⁸
High	Clean up citations and business listings to the current Burdine address	Local consistency supports trust and local visibility. ⁹
High	Rebuild thin utility pages or noindex them until rebuilt	Appointment, contact, and similar pages are indexable but currently mis-labeled or too thin. ¹⁰

Scope, assumptions, and access

This audit uses **publicly accessible site pages, indexed search results, competitor SERPs, and official Google / Texas HHSC documentation**. I did **not** have direct access to Google Analytics 4, Google Search Console, Google Tag Manager, server logs, or the CMS. I also could not reliably fetch the site's raw `robots.txt` and `sitemap.xml` contents with the available browsing tools, so those files remain unverified from firsthand inspection. Search Console remains the source of truth for indexing and rank-position diagnostics once owner access is available. ¹¹

Business-model assumptions

Assumption	Why this is a reasonable assumption
Primetime's core revenue likely includes Texas Medicaid / HHSC-linked home-care programs rather than only private-pay senior care	The site emphasizes attendant care, protective supervision, respite, insurance acceptance, and the company appears in HHSC contract and eligibility records for PHC/FC/CAS. ¹²

Assumption	Why this is a reasonable assumption
A second growth goal is probably caregiver / attendant recruitment	The site has a dedicated Careers page, and leadership copy says the company supports over 500 PAS attendants. ¹³
The business likely needs both consumer leads and referral / reputation trust	The site highlights insurance, staff, client reviews, contact forms, and community credibility signals. ¹⁴
Geographic focus is Greater Houston plus surrounding counties / communities	The homepage says Greater Houston; the About page lists Houston, Harris, Fort Bend, Montgomery, Galveston, Jefferson, and several communities. ¹⁵

What owner access would materially improve

With GA4 and Search Console access, this report could replace directional rank/demand judgments with exact data for clicks, impressions, CTR, average position, indexed count, sitemap status, Core Web Vitals reports, and conversion rates by landing page. Google recommends verifying Search Console ownership, submitting sitemaps, and using event measurement to capture business-relevant behavior. ¹⁶

What the public-site audit shows

Business-goal alignment

Public evidence suggests the site is trying to do four jobs at once: attract care seekers, explain program eligibility, recruit attendants, and establish organizational trust. The problem is not that these goals are wrong; it is that they are not cleanly separated into dedicated landing pages and CTAs. The top navigation mixes Services, Insurance, Resources, Careers, Contact, and an external transportation link, while the homepage repeats generic “Find Out More” messaging instead of routing each audience into a strong next step. ¹⁷

The homepage also contains duplicated hero/feature sections and repeated generic headlines such as “**True Healthcare For You and Your Family,**” “**Quality and Care,**” and “**Find Out More.**” That wastes high-value above-the-fold space that should instead answer: what exact programs are offered, who qualifies, what insurance is accepted, what areas are served, and what the user should do next. Google’s Search Essentials specifically recommends using the words people would use to find your content in prominent places such as titles, headings, alt text, and link text. ¹⁸

Recommended business architecture

- **Care seeker / family** funnel: service pages, insurance, areas served, reviews, consultation request.
- **Eligibility / Medicaid program** funnel: CAS, PAS, protective supervision, children under 21 / Medicaid process, accepted plans, “check eligibility.”
- **Referral partner** funnel: how referrals work, accepted plans, counties served, turnaround time, fax/contact.
- **Caregiver applicant** funnel: careers, requirements, benefits, application process, locations hiring.

That separation fits both the public site content and official HHSC program context. ¹⁹

Measurement audit

I could not verify whether GA4, Google Tag Manager, or Search Console are installed because raw source access and account access were unavailable. From an audit standpoint, that means **measurement status is unknown**, and unknown measurement should be treated as an operating risk until confirmed. Google Analytics is event-based, and Google explicitly recommends setting up recommended and custom events for business outcomes like lead generation; Search Console ownership verification is required to access crawl, indexation, and performance data. ⁷

For this site, the minimum lead-tracking package should include:

Event name	Trigger
<code>generate_lead</code>	Successful main contact-form submission
<code>generate_lead</code> with parameter <code>lead_type=appointment</code>	Appointment-form submission
<code>click_to_call</code> custom event	Tap/click on <code>tel:</code> links
<code>outbound_transport_click</code> custom event	Click to RidePrimetime external site
<code>caregiver_apply_start</code> custom event	Careers application start
<code>insurance_inquiry</code> custom event	Insurance / benefits contact CTA
<code>location_lookup</code> custom event	Click on maps / directions
<code>qualified_lead_closed</code> via Measurement Protocol or CRM sync	Offline lead converted to patient / referral / hire

Google's event references specifically recommend `generate_lead` for initial lead acquisition events like form submissions or requests, and Google's Measurement Protocol can be used to augment web tagging with server-side or offline conversions. ²⁰

What I would mark today

Audit item	Public status	Practical conclusion
GA4 property present	Unverified	Treat as missing until Tag Assistant or source inspection confirms
Search Console verified	Unverified	Treat as missing from an SEO-operations standpoint until confirmed
Phone-click tracking	Unverified	Must be implemented; calls are visibly central to the site's CTA model. ²¹

Audit item	Public status	Practical conclusion
Form-submit tracking	Unverified	Must be implemented for contact and appointment flows. ²²
Thank-you page / success event	Unverified	Use dedicated success states or event callbacks
Cross-domain / outbound tracking to RidePrimetime	Unverified	Needed because the nav sends users to another domain. ²³

Crawlability and indexation

The site root redirects from `https://pthhs.net/` to `https://www.pthhs.net/`, which is good because it establishes a preferred host. ²³

What is more concerning is the **quality of the pages that are indexable**. Public search results show that Google-like engines can find and index utility pages such as the privacy notice, contact page, appointment page, staff page, insurance page, client reviews page, and areas-served page. Indexability is not the problem; **indexing the wrong pages with the wrong keyword targets is the problem**. Utility pages are being allowed to compete in search even when their titles/H1s point at unrelated service terms. ²⁴

The following page set should be reviewed first:

URL	Current issue	Action
<code>/home-care-contact-us</code>	Indexed, but labeled “Light Housekeeping” instead of Contact	Rebuild as conversion page or temporarily noindex until corrected. ²⁵
<code>/home-care-set-an-appointment</code>	Indexed, but labeled “Children Health Plan” instead of appointment / consultation	Rebuild as “Request Consultation / Check Eligibility” page. ²⁶
<code>/home-care-meet-our-staff</code>	Indexed, but labeled “Attendant Care Services,” risking service cannibalization	Rebuild around team/leadership intent; keep indexed only if rewritten. ²⁷
<code>/home-care-insurance</code>	Indexed, but labeled “Home Health Therapy” while page is about accepted insurance	Rewrite page title/H1 and add plan-specific detail. ²⁸
<code>/home-care-areas-we-serve</code>	Indexed but thin; says Greater Houston without unique city-level content	Expand or split into actual service-area landing pages. ²⁹
<code>/privacy-notice</code>	Indexed legal page	Consider <code>noindex, follow</code> unless there is a legal reason to keep it indexed. ³⁰

I could not verify `robots.txt`, sitemap references, self-canonicals, or noindex tags directly. Because Google recommends submitting a sitemap in Search Console and optionally referencing it in `robots.txt`, I would treat “**verify sitemap existence and canonical policy**” as an early technical task. ³¹

Site architecture and internal linking

The current navigational architecture is shallow enough for major pages to be reachable in one or two clicks, which is good. The larger issue is **topic architecture**, not click depth. Services that deserve their own search presence are folded together or mislabeled. “Protective Supervision” is highlighted in navigation and on the homepage, but public search discovery points users mostly to mixed service pages instead of a strong dedicated landing page. ³²

The homepage and interior pages also rely heavily on weak anchor text such as “**Find Out More,**” “**Click Here,**” and generic service-card labels. Google recommends descriptive link text, and descriptive internal links also help reinforce topical relevance across the site. ¹⁸

Current high-level site map

The navigation above is visible on the site across core pages. ³³

Recommended information architecture

That structure aligns with the way people actually search and with Google’s advice to create useful, clearly described content with crawlable internal links. ³⁴

Page quality and on-page SEO

The site has real trust material, but important pages are still weakened by thin copy, template remnants, and mismatched optimization. The About page is a strong trust-building asset overall, yet it contains a visible “**Content Coming Soon...**” section even though more content follows below it, which signals unfinished templating. The Areas We Serve page is too generic to rank well for city- or county-specific intent. The homepage contains strong social proof, but the trust signals are not organized into a decisive conversion block above the fold. ³⁵

The biggest on-page problem remains title/H1 mismatch:

Page	Current search/title targeting	What it should target
Home	"Home Health Agency / In-Home Support / Home Care"	Clear Houston home care + attendant services + brand targeting. ³⁶
Services	"Senior Home Care"	Service hub for home care, attendant care, respite, supervision. ³⁷
Attendant Care	H1 says "Elderly Care in Texas"	Attendant Care Services in Houston / Greater Houston. ³⁸
Respite	H1 says "Elderly Home Care in Houston, Texas"	Respite Care in Houston. ³⁹
Insurance	H1 says "Home Health Therapy in Houston, Texas"	Accepted Insurance for Home Care in Houston. ²⁸
Contact	H1 says "Light Housekeeping in Houston, Texas"	Contact Primetime Home Health Services. ²⁵
Appointment	H1 says "Children Health Plan in Houston, Texas"	Request Consultation / Check Eligibility. ²⁶
Meet Our Staff	H1 says "Attendant Care Services in Houston, Texas"	Meet the Leadership Team. ²⁷

There is also a strategic content gap. The blog has posts published in late 2024 and early 2025, which shows content activity, but most high-value questions still deserve permanent conversion-adjacent pages rather than only blog coverage: qualification, Medicaid process, what protective supervision means, how respite works, which insurance plans are accepted, what counties are served, and how to start care. ⁴⁰

Mobile experience, structured data, and local authority

Google uses mobile-first indexing, and Google strongly recommends achieving good Core Web Vitals. I was not able to pull live PageSpeed Insight scores for PTHHS.net, but the site's repeated image-heavy blocks, duplicated homepage sections, and template-heavy layouts make performance optimization a likely opportunity—especially on mobile. ⁴¹

Structured data is another likely missed opportunity. I could not confirm existing schema from the public render, so implementation should be tested with Google's Rich Results Test. At minimum, the site should have `LocalBusiness`, `Organization`, and `BreadcrumbList` markup, with `Article` markup on blog posts. Google recommends using the most specific local-business subtype that makes sense and validating structured data with the Rich Results Test. ⁴²

Local authority is mixed. On the positive side, public branded references exist on LinkedIn, Facebook, CareAvailability, CareListings, and a Houston home-care directory that references Texas HHS public records. On the negative side, at least one high-visibility directory still shows an older address, which is exactly the kind of citation inconsistency that should be cleaned up. ⁴³

Crawl/index issue visualization

The redirect and the mislabeled utility pages are visible in the public page snapshots and search results.

44

Keyword demand, intent, and SERP competition

The table below uses **directional volume bands** rather than exact monthly numbers, because exact Google search volume requires owner access to Google Ads Keyword Planner or a paid keyword database. Rank observations are from public live search snapshots on July 10, 2026; once Search Console access is available, replace these with actual average position and query-level click data. Google Search Console is the correct long-term source for that validation. ¹¹

Keyword-to-page map

Keyword cluster	Monthly volume band	Intent	Public current rank snapshot	Business value	Best target page	Recommendation
home care houston tx	High	Commercial / local	Not observed in visible top snapshot; competitors like All About Home Care and others are more prominent. ⁴⁵	High	Home	Rebuild homepage around Houston home care + attendant services + insurance + consultation CTA
home health agency houston tx	Medium	Commercial / local	Not observed in visible top snapshot; stronger competitors and hospitals appear. ⁴⁶	Medium	About or Home	Decide whether this is a true primary term; if yes, create a better service-led page, not just About
attendant care services houston tx	Low to medium	Commercial / local	PTHHS appears visibly for this query family. ⁴⁷	High	Attendant Care page	Protect and improve this position with corrected H1/ title, eligibility details, FAQs, and city/service-area relevance
respite care houston tx	Medium	Commercial / local	Not observed in visible top snapshot; non-profit, assisted-living, and franchise results dominate. ⁴⁸	High	Respite Care page	Rewrite around local caregiver-relief intent and add service area, care scenarios, and conversion proof

Keyword cluster	Monthly volume band	Intent	Public current rank snapshot	Business value	Best target page	Recommendation
protective supervision houston tx	Low	Commercial / program-intent	No strong dedicated PTHHS landing page surfaced; term is buried in mixed pages. 49	High	New Protective Supervision page	Create a dedicated page with who it helps, program context, eligibility pathway, and FAQs
personal attendant services houston	Low to medium	Commercial / program-intent	No strong dedicated PTHHS page surfaced; competitors explicitly target PAS. 50	High	New Personal Attendant Services page	Create a dedicated PAS page; do not force PAS to live only inside broader attendant copy
community attendant services houston	Low to medium	Informational → commercial	Official HHSC and informational sources dominate. 51	High	New CAS / Eligibility page	Build a page that answers the official-program question, then hands off to Primetime as provider
medicaid home care houston	Medium	Informational → commercial	Competitors like Newport are more explicit about Medicaid-covered care. 52	High	New Medicaid / Eligibility page	Build a focused "Medicaid home care in Greater Houston" page tied to plans and programs you actually support
accepted insurance home care houston	Low	Transactional / validation	Existing insurance page is indexed but mislabeled. 28	Medium to high	Insurance page	Keep indexed, but rename and expand by plan and payer FAQ

Keyword cluster	Monthly volume band	Intent	Public current rank snapshot	Business value	Best target page	Recommendation
primetime home health services	Branded	Navigational	Branded queries already surface the site and profiles. ⁵³	Medium	Home / GBP / socials	Defend branded trust with consistent NAP, review management, and sameAs schema

Competitor and SERP gap matrix

Competitor / SERP type	What they are doing better in public search	Gap for PTHHS	Recommended response
All About Home Care	Ranks strongly for generic Houston home-health/home-care terms and has a fuller portal/information structure. ⁵⁴	PTHHS homepage is too generic and not service-program-specific enough	Rebuild homepage and services hub for stronger commercial-intent match
Harbor Home Care	Clear local proposition and service blocks including respite. ⁵⁵	PTHHS service pages are mislabeled and less differentiated	Add stronger service-page copy, proof, and local intent formatting
Accessible Home Health Care	Uses authority signals like CMS 5-star language and awards. ⁵⁶	PTHHS underuses trust/credential copy above the fold	Surface licensure, years in business, attendant count, accepted plans, and testimonial proof
Newport Home Health	Explicitly targets Medicaid caregivers, personal assistance, respite, and Houston location terms. ⁵⁷	PTHHS does not yet own Medicaid / PAS intent cleanly	Build Medicaid, PAS, and eligibility pages
Aleris Home Health	Long-form local content, insurance mention, FAQs, multiple service areas. ⁵⁸	PTHHS local pages are thin and under-explanatory	Expand service-area and insurance content; add FAQs and care scenarios
HHSC informational pages	Dominate for CAS/program terms with official definitions and eligibility context. ⁵⁹	PTHHS is trying to rank for program-adjacent terms without answering the official-program question	Create “what is CAS / who qualifies / how Primetime helps” content rather than only sales copy

Page-level briefs and exact implementation assets

Page-by-page revision briefs

Page	Keep / rebuild	What to change
Home	Rebuild	Replace repeated hero blocks with one primary proposition: “Home care and personal attendant services in Greater Houston.” Add three audience CTAs: Check Eligibility , Request Consultation , Apply as a Caregiver . Move insurance logos and service areas above the fold. Add one proof strip: “Serving Greater Houston since 1999,” “500+ PAS attendants,” “Accepted plans,” “Call 713-977-7721.” Evidence of current duplication and proof material already exists on the site. ⁶⁰
Services hub	Rebuild	Turn the page into a hub rather than a mixed article. Create cards and summaries for Attendant Care, Personal Attendant Services, Community Attendant Services, Protective Supervision, and Respite. Current page lumps multiple intents together. ⁶¹
Attendant Care	Keep, but rewrite	Fix title/H1. Add “Who this helps,” “Tasks we help with,” “How attendant services work,” “Programs and insurance,” “Family caregiver option,” “Areas served,” “FAQ,” and a strong CTA. The current page has relevant raw material but points at “Elderly Care” instead of the actual service name. ⁶²
Respite Care	Keep, but localize and strengthen	Fix title/H1. Keep FAQ section, but add Houston-area trust, caregiver scenarios, duration options, response time, who respite is for, and insurance/program notes. The page already has useful FAQ depth. ⁶³
Protective Supervision	New page	Promote what is currently buried in mixed service text into its own URL. Focus on safety monitoring, dementia / disability use cases, how it differs from general companionship, and eligibility pathways. ⁴⁹
Insurance	Keep, but expand	Fix title/H1. Add plain-language sections for each accepted payer or plan family, whether services are Medicaid / plan dependent, and what to prepare before calling. ²⁸
Areas We Serve	Rebuild	Replace generic “Greater Houston Area” copy with real city/county sections for areas truly staffed. Use unique copy, travel/service notes, and nearby landmarks only where allowed by Google’s business guidelines. ⁶⁴
Contact	Rebuild	Fix title/H1. Add program-specific inquiry choices, office hours, map, family/referral/caregiver routing, and response-time expectation. Current page is usable but mislabeled. ²⁵

Page	Keep / rebuild	What to change
Appointment	Rebuild	Convert into Request Consultation / Check Eligibility . Replace the current mislabeled template with a short intake form that captures care type, insurance, county/city, patient age, and urgency. ²⁶
Meet Our Staff	Keep, but de-optimize from service intent	Fix page title/H1 and add Person -style structured details if desired, but do not let this page target commercial service keywords. ²⁷

Recommended title, meta description, and H1 replacements

URL	Title tag	Meta description	H1
/	Home Care and Personal Attendant Services in Houston, TX Primetime Home Health Services	Compassionate home care in Greater Houston, including attendant care, respite care, protective supervision, and Medicaid-supported programs. Call 713-977-7721.	Home Care and Personal Attendant Services in Houston, Texas
/home-care-services	Home Care Services in Houston, TX Attendant Care, Respite, Protective Supervision	Explore home care services from Primetime in Greater Houston, including attendant care, respite care, protective supervision, and support for daily living.	Home Care Services in Houston, Texas
/home-care-services/attendant-care-services	Attendant Care Services in Houston, TX Primetime Home Health Services	Trained attendants help with bathing, dressing, mobility, grooming, meals, and daily routines. Serving Greater Houston families.	Attendant Care Services in Houston, Texas
/home-care-services/respite-care	Respite Care in Houston, TX Relief for Family Caregivers	Temporary in-home respite care for seniors and adults with disabilities. Get trusted relief for family caregivers in Greater Houston.	Respite Care in Houston, Texas
/home-care-insurance	Accepted Insurance for Home Care in Houston, TX	See accepted insurance and Medicaid-related plan partners for home care services in Greater Houston.	Accepted Insurance for Home Care in Houston, Texas
/home-care-contact-us	Contact Primetime Home Health Services Houston, TX	Call, email, or message Primetime Home Health Services for care questions, referral support, or caregiver inquiries.	Contact Primetime Home Health Services

URL	Title tag	Meta description	H1
<code>/home-care-set-an-appointment</code>	Request a Home Care Consultation in Houston, TX	Start with a consultation to discuss care needs, eligibility, service areas, and accepted plans.	Request a Home Care Consultation in Houston, Texas
<code>/home-care-meet-our-staff</code>	Meet Our Home Care Leadership Team Primetime Houston	Learn about the leadership team behind Primetime Home Health Services in Houston.	Meet Our Leadership Team
<code>/home-care-areas-we-serve</code>	Home Care Service Areas in Greater Houston Primetime	See the Greater Houston communities Primetime serves for home care, attendant services, and respite care.	Home Care Service Areas in Greater Houston

Alt-text replacements

The site currently uses many generic image labels in rendered output. Replace decorative or repetitive alt text with either empty alt attributes for purely decorative imagery or descriptive, user-helpful text for meaningful images. Google advises using descriptive alt text where appropriate. ⁶⁵

Recommended examples:

- Caregiver assisting an adult client with walking support at home in Houston
- Family caregiver speaking with Primetime care coordinator
- Home care consultation with caregiver and elderly client
- Primetime Home Health Services office in Houston
- Insurance partner logos accepted by Primetime Home Health Services

Structured data snippet

Use JSON-LD and validate it with Google's Rich Results Test. Google supports Organization, LocalBusiness, Breadcrumb, and Article-appropriate markup where relevant. ⁴²

```
{
  "@context": "https://schema.org",
  "@type": "LocalBusiness",
  "name": "Primetime Home Health Services, Inc.",
  "url": "https://www.pthhs.net/",
  "telephone": "+1-713-977-7721",
  "email": "pas@pthhs.net",
  "address": {
    "@type": "PostalAddress",
    "streetAddress": "11602 Burdine Street, Suite A",
    "addressLocality": "Houston",
    "addressRegion": "TX",
  }
}
```

```

    "postalCode": "77035",
    "addressCountry": "US"
  },
  "areaServed": [
    "Houston",
    "Harris County",
    "Fort Bend County",
    "Montgomery County",
    "Galveston County"
  ],
  "sameAs": [
    "https://www.facebook.com/primetimehomehealth/",

    "https://www.instagram.com/primetimehomehealthservices/"
  ]
}

```

The address, brand, and social-profile references above are publicly visible across the site and third-party profiles. ⁶⁶

A standard breadcrumb implementation should also be added on all interior templates:

```

{
  "@context": "https://schema.org",
  "@type": "BreadcrumbList",
  "itemListElement": [
    {
      "@type": "ListItem",
      "position": 1,
      "name": "Home",
      "item": "https://www.pthhs.net/"
    },
    {
      "@type": "ListItem",
      "position": 2,
      "name": "Services",
      "item": "https://www.pthhs.net/home-care-services"
    },
    {
      "@type": "ListItem",
      "position": 3,
      "name": "Attendant Care Services",
      "item": "https://www.pthhs.net/home-care-services/attendant-care-services"
    }
  ]
}

```

```
]
}
```

Developer task list

Task	Owner
Map every template to the correct title tag, meta description, and H1 rules	SEO + developer
Remove duplicated homepage hero/content blocks	Developer
Add self-referencing canonicals on all indexable pages	Developer
Verify or create XML sitemap, submit in Search Console, and reference in <code>robots.txt</code>	Developer + SEO
Add <code>LocalBusiness</code> , <code>Organization</code> , <code>BreadcrumbList</code> , and <code>Article</code> schema where appropriate	Developer
Create dedicated templates for service pages, eligibility pages, and city/county pages	Developer + content
Convert hero and service images to modern formats, lazy-load below the fold, preload LCP image	Developer
Track <code>generate_lead</code> , phone clicks, external transport clicks, and offline closed leads	Developer + analytics
Add concise, descriptive internal links instead of "Click Here" / "Find Out More"	Content + SEO
Standardize NAP everywhere, then update external citations	Marketing / operations

Prioritized 90-day roadmap

Prioritized issue list

Issue	Evidence	Impact	Recommendation	Priority	Effort	Owner	KPI
Wrong title/H1 targeting on major pages	Contact, appointment, staff, insurance, attendant, and respite pages are all mismatched. 2	Relevance loss, cannibalization, lower CTR, user confusion	Correct template map for title/meta/H1 across all high-value pages	Critical	Medium	SEO + developer	Improve CTR, rankings, leads

Issue	Evidence	Impact	Recommendation	Priority	Effort	Owner	KPI
Business intents are mixed on the same pages	Services, insurance, careers, appointment, resources, and transport all compete inside one architecture. ⁶⁷	Lower conversion rate and weaker topical authority	Split into care-seeker, eligibility, referral, and caregiver funnels	Critical	Large	Strategy + content + developer	Organic conversion by landing page
Thin / mis-targeted utility pages are indexed	Appointment, contact, privacy, areas, and staff pages are indexable despite quality issues. ⁶⁸	Wasted crawl budget, cannibalization, poor SERP quality	Rebuild or noindex thin utility pages until fixed	High	Medium	SEO + developer	Indexed quality,
Missing dedicated pages for PAS / CAS / Protective Supervision / Medicaid intent	Terms appear, but not as strong dedicated pages. ⁶⁹	Lost non-branded demand	Create dedicated pages with FAQs and next-step CTAs	High	Large	Content + SEO	Impressions for non-branded program terms
Citation inconsistency on address	Site uses Burdine; CareListings shows older Bissonnet listing. ⁷⁰	Local trust and local ranking risk	Update major data aggregators and key directories to current NAP	High	Medium	Operations / local SEO	Local impressions, calls, direction
Measurement cannot be confirmed	No account access; key lead events unverified. ⁷¹	Can't attribute organic ROI	Implement GA4 + GSC + event tracking package	High	Medium	Analytics + developer	Lead volume by source page

Issue	Evidence	Impact	Recommendation	Priority	Effort	Owner	KPI
Homepage wastes prime space with duplicated/generic messaging	Repeated hero/feature blocks and generic CTAs on homepage. ⁷²	Lower engagement and weaker value communication	Replace with one strong proposition and three intent-based CTAs	High	Medium	Content + design + dev	Bounce/engagement/lead rate
Areas page is too generic	"Greater Houston Area" copy without city-level detail. ⁷³	Weak local relevance	Build real city/county pages only where legitimately served	High	Large	Content + local SEO	Local no branded impressions
Weak descriptive internal linking	"Find Out More" and "Click Here" repeated. ¹⁸	Weak internal topical reinforcement	Replace with descriptive anchors to service/eligibility pages	Medium	Small	Content	Internal distribution rankings
Schema and sitemap status unverified	Could not confirm markup or sitemap directly. Google recommends sitemap submission and schema validation. ⁷⁴	Lower technical clarity	Validate and implement schema plus sitemap submission	Medium	Medium	Developer	Valid item crawl discovery

Conversion experiments

A good 90-day SEO plan should improve not just rankings, but also lead efficiency. Based on the current site, the highest-value experiments are:

Experiment	Hypothesis	Success metric
Replace generic homepage CTA with three intent CTAs: Check Eligibility, Request Consultation, Apply as a Caregiver	Visitors will self-sort faster and convert at a higher rate	Increase in organic lead rate and reduced pogo-sticking
Add sticky mobile call / consultation bar	Call-first users will convert faster on mobile	Call-click rate from organic landing pages
Add "We accept..." insurance block above the fold on service pages	Insurance confidence reduces friction	Form completion rate

Experiment	Hypothesis	Success metric
Add response-time promise	"We respond same business day" increases lead confidence	Lead submission rate
Add care-scenario blocks on Respite and Attendant pages	Visitors need concrete use cases, not generic promises	Scroll depth, CTA click rate
Build a two-step qualification form	Short first step reduces abandonment	Form-start to form-submit rate

Timeline

Owner-only checks to run immediately

Once access is available, run these in the first week:

Tool	Exact check
Search Console	Performance report → Pages: <code>/</code> , <code>/home-care-services</code> , <code>/home-care-services/attendant-care-services</code> , <code>/home-care-services/respite-care</code> , <code>/home-care-contact-us</code> , <code>/home-care-set-an-appointment</code> ; compare last 16 months vs previous period
Search Console	Queries regex contains: <code>attendant respite protective medicaid home care houston</code>
Search Console	URL Inspection on all priority pages to confirm canonical, index status, and discovered vs submitted URLs
Search Console	Sitemaps report for XML sitemap submission status
GA4	Landing page report with organic traffic and conversions for consultation, contact, phone click, and caregiver starts
GA4 Realtime / DebugView	Test form submit, phone click, and outbound RidePrimetime click

Tool	Exact check
Tag Assistant	Verify only one Google tag fires and events are not duplicated
PageSpeed Insights	Mobile tests for home, services hub, attendant page, respite page, contact page
Rich Results Test	Validate schema on home, services, and blog post templates
Screaming Frog	Crawl plus near-duplicate title/H1 report, orphan-page report with GSC integration, thin-page list, image-weight report

Google's documentation supports Search Console ownership, sitemap submission, event setup, and validation workflows for exactly these kinds of checks. ⁷⁵

The practical outcome target for the first 90 days is straightforward: **clean relevance signals, stronger service and eligibility pages, trustworthy local data, and measurable lead generation**. If those are executed well, PTHHS.net should be in a much stronger position to grow both non-branded search visibility and actual consultations, referrals, and caregiver applications. ⁷⁶
